PROJECTS

- **Finance Management App**
  Personally created single project using React.js + TypeScript. The project uses Redux state control technology. The essence of the project is to control the user's finances and calculate personal spending statistics.

- **Football Match Viewer**
  Personally created single project using React.js + TypeScript. The project uses data request processing from a json file. The essence of the project is to watch matches of football teams, obtaining complete information about the match

- **Projects implemented within the company**
